```
This sequence is a fusion protein of hid and Jun. The invention craited to a method of forming a cystelle knot protein (1) having alpha and beta-subunits comprising attaching a dimeriation domain (DD) to cether the N-termin of both subunits or the N-termins of the beta-subunit and to the C-termina of the beta-subunit and dimerising the products to form a heterodimeric protein analog (1). The method is used to produce analogues (agonists or antagonists) of deglycosylated cylopotrotein hormones, potentially useful. 69 for treating infartility where caused by polycystic ovariand disease (associated with excessive considerable by polycystic ovariand disease (associated with excessive constitution of a nitigans (since a DD may constaining highly antiganic amino acid sequences). Attachment of a DD (which may be removed later; and thus receptor-binding and immunogenic properties) to native dimers, and thus receptor-binding and immunogenic properties) to native dimers. (and thus receptor-binding and immunogenic properties) to native dimers, cond allows the combination of subunits that would other-size combine poorly, or not at all. The N-terminal part of a glycoprotein hormone may formation of homodimers. Heterodimers have land of the Draduces formation of homodimers. Heterodimers have land crucialized without loss of activity, and attachment of the Draduces in crulation times in
                                                                                                                                                                                   Cysteine knot protein; protein formation; heterodimeric protein analog; deglycosylated glycoprotein hormone; infertility; immunogen; antigen; polycystic ovarian disease; hGG; human; chorlonic gonadotrophin; beta subunit; therapy; Jun.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Methods for producing heterodimers, particularly analogues of hormones, from subunits of cysteine knot proteins -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2 SKEPLRPRCRPINATLAVEKEGCPVCITYNTTICAGTCPTMTRVLOGVLPALPOVVCNTR 61

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to human single chain forms of the glycoprotein chormone quartet which is an agenist or antagenist of illucianising hormone common quartet which is an agenist or antagenist of illucian benome (TSH), follucia stimulating hormone (TSH), follucia stimulating hormone (TSH), follucia as the manner submits are used in treating infertility, as aids in vitro fartilisation techniques, and other therapeutic methods associated with the native hormones. The single chain hormones are useful as reagents in a manner similar to heteroflance, as it describes to the chain hormones are useful as requested with the native hormones the single chain hormones are useful as reagents in a manner similar to heteroflance, as disposing the cect the presence of antibodies with respect to the native proteins in closely control samples, in detecting and purifying elect the presence of antibodies in various samples, in detecting and purifying receptors to which the native hormones blud; the single chain hormones are used to a guiltiply chromose administered as purification of subsequent preparations of these materials and to monitor consisting as the single chain hormones administered as advugs; The single chain hormones administered as advugs; The single chain of subsequent between antibodies specifically immunoreactive with these new compounds, as substitutes for the heteroflancic forms of hormones. The present sequence is human single chain gonadotropin and one one breitand to the invention and so consisting of human chorinic gonadotropin (CG) beta-subunit (1-12 and one one) of the sequence is the subunit (1-12 and one one) of human chormone of human chormone of humans.

Consisting and DDPR peptide fused to human single chain gonadotropin and one compound for template directed version and one peptide fused to human single chain gonadotropin and one consisting sequence is not shown in the specification, but is derived from thuman single chain gonadotropin and one of the human single chain gonadotropin and cut-ved from 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Watch 71.4%: Score 555, DB 22; Length 234; Best Local Smalarity 85.5% pred. 40.9, 2e-43; Local Smalarity 85.5% pred. 40.9, 2e-43; Indels 0; Caps Matches 106; Conservative 0; Mismatches 18; Indels 0; Caps

The sequence is an analogue comprising amino acids 1-118 of mature hGC beta subunit having residues 102-107, 109, 10, and 112-118 replaced by the corresponding residues in the hESH protein. It was prepd. by site directed mutagenesis of a cDNA sequence encoding the hGC bets subunit. The chimerit horomone is capable of directing horomone binding to both it and FSH receptors and may be useful for the treatment of infertility in men and women and the promotion of fertility in male and female animals. (See AAR15041, AAR15061-R15125 and AAR15161-R151298).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match 71.2%, Score 553; DB 12; Length 118; Best Local Similarity 92.8%, Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    음
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence is a fusion protein of HLM and Jun. The invention calculates to a method of forming a cysteine knot protein (i) having alpha calculates to a method of forming a cysteine knot protein (ii) having alpha calculates to a method of forming a cysteine knot be protein (ii) having a plua calculate the Wienzmini of both subunits or the Wienzmini of both subunits or the Wienzmini of the beta-subunit and dimerising the products to form a heterodimeric protein and of dimerising the products to form a heterodimeric protein and of (iii). The method is used to produce analogues (sponists or antagonists) of deglycosylated glycoprotein hormones, potentially useful, e.g. for treating infertility where caused by polycystic ovarian disease (associated with excessive caused to proyestic ovarian disease (associated with excessive cannon and amonogenes or antigens (since a bo may containing highly antigens) facilitates the formation of heterodimers, that have similar structures and allows the combination of subunits; that vould otherwise combines, and allows the combination of subunits that vould otherwise combines, of subunities that vould otherwise compliances. Heterodimers have condicted without loss of activity, and attachment of the DD reduces by formation of homodimers. Heterodimers have longer circulation times in vivo than individual subunits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                     Cysteine knot protein; protein formation; heterodimeric protein analog; deglycosylated glycoprotein hormone; infertility; immunogen; antigen; polycystic ovarian disease; hGG; human; chorionic gonadotrophin; beta subunit; therapy; Jun.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Methods for producing heterodimers, particularly analogues of hormones, from subunits of cysteine knot proteins -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2 SKRPLAPRCRPINATLAVERECCPVCITVATTICACYCPHTRULGOVLPALEQVYCNYR 61 | 11111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111 | 1111

          The sequence represents the amino acid sequence of single chain gonadorroptin analogue #7. The giveportoein homomoe analogue is an addotroptin analogue #8. The giveportoein homomoe analogue is considered and analogue #8. The giveportoein homomoe analogue is considered and the considered in a manner similar to the methods associated with the native componence, and in other therapoutic methods associated with the native protests and in other therapoutic methods associated with the native protests and in other therapoutic methods associated with the native protests and in detect in a manner similar to the heterodimer, as a disposit cool to detect the presence of antibodies with respect to the native proteins in the presence of antibodies with respect to the native proteins in the levels of these homomes in various samples, and in detecting and locate is of these homomes to honodimers have the following adventages over their dimeric forms: they are more stable, problems of recombinant production are reduced since only a single gene is needed to transcribe, could not accompanie to the dimeric form the studies of the dimeric form and process, provide an alternate form thus permitting fine tuning of activity levels and of in vivo half lives. Single chain forms are unique starting materials for identifying truncated forms with the protein to be engineered without disturbing the overall folding of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New single chain forms of the glycoprotein hormone quartet useful for generating antibodies specifically immunoreactive with the new compounds, in treating infertility, or as aids for in vivo fertilization techniques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ouery Match 71.2%; Score 553; DB 22; Length 234; Best Local Similarity 85.5%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                The single-chain gonadotropin analogue 3a (human LH-beta(1-114) INSX1-linker-human GG-alpha(1-92) [PSZX,WSRX]) can be derived from analogue 3 by removing at least one of the glycosylation sites. The partially deglycosylated analogue has anti-lutefinising hormone (lutropin) activity and can be used for facilitating hormaniating pregnancy and reducing analogue necetion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Location/Qualifiers

analog no: Telated to the invention. Analog no:7 is a fusion protein consisting of human chorinoic granddorrouln (GG) betas subunit (1.100 amino exits) and follicle stimulating hormone (FSH) beta subunit (19-108 amino acits) fused to human single chain gonadorroph alpha-subunit (19-2 amino acits) that Inker sequence. This analog serves as a useful starting momental for template directed vaccine desires as a useful starting hormone-specific vaccines for use in humans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 135..142

Abbel- linker

143..234

/label- Gonadotropin_alpha_subunit_(1-92)

194

The sequence is an analogue of mature hCG beta subunit having several residues replaced by the corresponding residues in the bovine LH protein and residues 23-145 deleted. The chimeric hormone may be useful for identifying residues which are important for binding to the human receptor and may also have applications as an immunogen, apoinst and/or antagonist.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match 70.7%; Score 549.5; DB 12; Length 122; Best Local Similarity 78.1%; Pred. The giveportein homeone analogue 18. Conductorpin analogue 16. The giveportein homeone analogue 18. Conductorpin analogue 18. The giveportein homeone analogue 18. Conductorpin and in other therapeutic methods associated with the native hormone. The single chain protein is further useful as a reagent in a manner similar to the heterodimer, as a diagnostic tool to detect the conductorpin analogue 18. Conductorpin and the presence of antibodies with respect to the native proteins in the bological samples, as a control reagent in assay fits for assessing the presence of antibodies with respect to the native proteins in the bological samples, as a control reagent in assay fits for assessing the crevels of these hormones in various samples, and in detecting and protess, provide an aircraft of production are reduced since only a single spen is needed to transactible, translate and process, provide an alternate form thus permitting fine tuning of activity levels and of in vivo half lives, single chain forms are unique starting analorism of vivo half lives. Single chain forms care unique starting analorism to invivo half lives. Single chain consistent control to be engineered without disturbing the overall folding of the consistent of the dimer. The linkage between the subunits permits the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New single chain forms of the glycoprotein hormone quartet useful for generating antibodies specifically immunoreactive with the new compounds, in treating infertility, or as aids for in vivo fertilization techniques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match 70.7%; Score 549; DB 22; Length 237; Best Local Similarity 86.0%; Pred. ```

The invention relates to human single chain forms of the glycoprotein hormone quartet which is an agonist or antagonist of lutenialing hormone (ER), follicle stimulating hormone (ER), thyroid stimulating hormone (FS), thy of or chorionic gnadokropin (CG). All these hormones are heterodimers

Addition of oligosaccharides has a positive effect on stability of hormones in circulation and can be used to present unwanted antibody or receptor interactions. The present analogue has anti-follicle stimulating hormone (follitropin) and anti-intenhising hormone (fultropin) activity and is useful for treating ovarian hyperstimulation and reducing spermatogenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          21 SKEPLRPRCRPIXATLAVEKEGCPVCITVXTTICAGYCPTWIRVLGGVLRALPQVVCNYR 80

having identical alpha subunits and differing beta subunits. The agonist forms of single chain hormones are used in treating intertility, as aids can vitro fertilisation techniques, and other therapeutic methods associated with the native hormones. The single chain hormones are useful cassociated with the native hormones. The single chain hormones are useful cast reagants in a manner similar to heterodimers, as diagnostic tools to detect the presence of antibodies with respect to the native proteins in the control reagants in assay kits for assessing the biological samples, as control reagents in assay kits for assessing the receptors of the native hormones blind the single chain hormones are also used in affinity chromatographic preparation of receptors or antihomone antibodies. They are used as purification tools for antihomone antibodies they are used as purification tools for clavates of single chain hormones antihodies specifically manuoreactive leving outside the present DNA sequence is human single chain operator in the heterodimeric forms of the hormones. The present DNA sequence is human single chain gonadotropin and one of coding sequence related to the invention. Analog nois coding sequence related to the invention, and and one of coding sequence related to the invention. Analog nois coding sequence related to the invention, and one of its a customit (1:100 anno acids) and follicle stimulating hormone (FSH) betactionable subunit (1:09 anno acids) and follicle stimulating hormone (FSH) betact subunit (35:11) anno acids) fused to human single chain gonadotropin and subunit (35:11) anno acids) fused to human single chain gonadotropin and acids) fused to human single chain gonadotropin and acids) fused to human single chain gonadotropin and sequence. This analog serves to subunit (35:11) anno acids) fused to human single chain gonadotropin and sequence in humans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

The sequence represents the amino acid sequence of human lutefnising charmone beta subunit, amino acids 1-14. The protein is an important glycoprotein hormone beta-rediencr, along with chorionic gonadcorrent glycoprotein hormone heterodimer, along with chorionic gonadcorrent glycoprotein hormone heterodimer; along with chorionic gonadcorrent glycoprotein hormone heterodimer; along with chorionic gonadcorrent glycoprotein hormone heterodimer; along simulating hormone (TH), which all have identical alpha subunits but differing beta subunits. The proteins are useful for generating antibodies specifically improved the vith new roupounds, as substitutes for the exterior forms of the hormones, in the treatment of infartility, as east for in vivo fertilisation techniques, and in other therpeutic correct for the native hormones. The single chain proteins as diagnostic tools to detect the presence of antibodies with respect to the native proteins in the biological samples, as control reagents in assign detecting and purifying receptors to which the native hormones can din detecting and purifying receptors to which the native hormones build. The single chain forms of the heterodimers or homodimers have the Collowing advantages over their dimeric forms; they are more stable, problems of recombinant production are reduced since only a single gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; chorionic gonadotropin; hCG; glycoprotein hormone; infertility; luteinisism hormone; Lif; follicle stimulating hormone; PSH; thyroid stimulating hormone; TR.

                                                                                                                                                                                                                                                                                                                                                                               A method has been developed for predicting the likely timing of the chast of menopause for a perimenopausia female. The method comprises of externating the amount of human luterinising homeone beta core fragment (hiff-beta of) in a sample from the subject by: (a) contacting a sample with an antibody (ab), which specifically binds to hiff-beta of incheracting a sample conditions permitting formation of a complex between the Ab and charter of complex between the Ab and charter of this heat of kill-beta of inches with the sample determined in step (b) with the amount of hiff-beta of in the subjects sample determined in step (b) with the amount of hiff-beta of in the sample step of the sample of the amount of hiff-beta of in the sample and indicates subject, where an amount of hiff-beta of in the sample stand and amount of the sample similar to the level in the known postmenopausal female subject, where an amount of hiff-beta of monopause and amount of the sample similar to the level in the known postmenopausal complex sample and indicates of menopause. An hiff-beta of has been sendoral distance from the onset of menopausa of characterize hiff-beta sample samilar to the level in the known premenopusal contacterize hiff-beta sample samilar to the level in the known postmenopausal contacterize hiff-beta sample samilar to the level in the known premenopusal contacterize hiff-beta of expression in the urine of both reproductive and contacterize hiff-beta sacessing ovarian function and to determine the effect of reference represents an hiff-beta fragment used in the contact of emenopausal female. The contact inventor of the present intention of the present inventor.
Determination of human luteinising hormone beta core fragment in urine samples, useful for predicting onset of menopause
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; luteinising hormone; beta core fragment; hLH; menopause; urine; antibody; hLH-beta cf.

properties, compared to wild type CKGPs, are claimed. The CKGP capperfamily compisses at least four families of growth factors: the capperfamily comprises at least four families of growth factors in a glycoprotein hormones, the platelet-derived growth factor-best family, the che meurotrophins and the transforming growth factor-best family; the cc families are known to be structurally similar (especially comprising the cc cysticines for topology) and it was shown that mutations at certain of positions in the CKGP hairpin loops of family members and other members of the CKGF superfamily could significantly alter the biological activities of the CKGP.

Card without the CKGP is a significantly alter the biological card and mutant thyroid stimulating hormone (TSH) heterodimes or analogue capperfamily administering the compressible of the CKGP.

Card are also useful to treat or diagnose thyroid cancer, by administering the mutant heterodimes or analogue to stimulate lodine uptake, and compressible administering radiolabeled iddine to treat the cancer or enable radiolabel detection (claimed).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                a
                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
is needed to transcribe, translate and process, provide an alternate form thus permitting fine tuning of activity levels and of in vivo half lives. Single chain forms are unique starting materials for identifying truncated forms with the activity of the dimer. The linkage between the subunits permits the protein to be engineered without disturbing the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This is the wild type human luteinizing hormone beta subunit. Mutants comprise at least one electrostatic charge altering mutation in a beta hairpin loop, resulting in increased bisoctivity. Mutant cystime knot growth factor (CKGP) proteins comprising one or more mutant subunits and having novel properties or improved pharmacological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        human luteinizing hormone; beta subunit; CKGF; mutant;
cystine knot growth factor; haliphi loop; thyroid stimulating hormone;
TSH; hypothyroidism; thyroid cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New mutant cystine knot growth factor proteins comprising one or more mutant subunits, vastul for treating or preventing diseases e.g. hypothyroidism and thyroid cancer.

Second 15, Application US/08918288
Patent No. 623889
GENERAL INFORMATION:
APPLICAMY: BOTHE ITVING
APPLICAMY: MOYLE, MILLIAM R.
TITLE OF INVENTION: GINCOROTEIN HORMONE QUARTER
NUMBER OF SEQUENCES: 83
CORRESPONDENCE ADDRESS:
ADDRESSEE: MORRISON & FORESTER
STREET: 2000 Pennsylvania Avenue, NW, suite 5500
CTIY: Washington
   SOPTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/425,673
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CONFRY: USA

Sequence 8, Application US/08425673

Patent No. 550826

Patent No. 550826

Patent No. 550826

TITLE OF INVENTION: Analogo of Glycoprotein Hormones Having

TITLE OF INVENTION: Analogo of Glycoprotein Hormones Having

TITLE OF INVENTION: Attends Receptor Binding Specificity and Activity and TITLE OF INVENTION: Methods For Preparing and Using Same

CORRESCONDENCE: 13

CORRESCONDENCE: 12

CORRESCONDENCE: 120

TITLE OF INVENTION: Methods For Preparing and Using Same

CORRESCONDENCE: 120

TITLE OF INVENTION: Methods For Preparing and Using Same

CORRESCONDENCE: 120

TITLE OF INVENTION: Methods For Preparing and Using Same

CORRESCONDENCE: 120

TITLE OF INVENTION: Methods For Preparing and Using Same

CORRESCONDENCE: 120

TITLE OF INVENTION: 120

TO CORRESCONDENCE: 120
